

Group Project 2: Transitioning a Failed Predictive Project to Agile

Project Scenario

Your team has been hired as Agile consultants to rescue a failed software development project. The project was originally planned using a Predictive (Waterfall) Development Approach, but due to evolving requirements, missed deadlines, and low stakeholder satisfaction, the project was deemed unsuccessful. Now, your team must restructure it using Agile methodologies to ensure a successful relaunch.

Project Details

Project Context (What Went Wrong?)

The client, a **mid-sized ecommerce company**, wanted to develop a new mobile app for their customers. The app was supposed to provide:

- Personalized product recommendations
- One-click checkout
- Real-time order tracking

The original **Predictive (Waterfall) plan failed** because:

- **Scope creep** led to last-minute requirement changes that were difficult to incorporate.
- **Stakeholders were not engaged** until late testing phases, leading to misaligned expectations.
- **Developers faced delays** due to rigid phase-based execution.
- **Testing was done too late**, leading to critical issues found at the end of development.

The company has now decided to **relaunch the project using Agile**, and your team must create a comprehensive Agile plan to bring the app to life successfully.

Project Deliverables

Your team must **develop an Agile plan** that includes the following elements:

1. Agile Vision Statement

- Define the high-level purpose and goals of the project in an Agile mindset.

2. Roadmap

- Outline major **milestones and high-level goals** for the next 3–6 months.
- Indicate expected **MVP (Minimum Viable Product) launch** and future feature enhancements.

3. Agile Project Board

- Use a tool like **Miro, Trello, Asana, or Monday.com** to create a **Kanban or Scrum board**.
- The board should include at least **3-5 sprint cycles** with appropriate user stories and tasks.

4. Product Backlog

- List **at least 15–20 backlog items**, prioritized by business value.
- Example backlog items:
 - "As a customer, I want to receive personalized product recommendations so I can find relevant items faster."
 - "As a customer, I want one-click checkout so I can purchase items more efficiently."

5. User Stories

- Create at least **10 well-defined user stories** using the standard format:
 - *As a [user type], I want [action] so that [goal].*

6. Agile Ceremonies

- Define the structure for **Sprint Planning, Daily Stand-ups, Sprint Reviews, and Retrospectives**.
- Explain how the team will **engage stakeholders frequently** for feedback.

7. Definition of Ready (DoR) and Definition of Done (DoD)

- Create a clear **DoR** (what must be in place before work begins on a backlog item).
 - Define **DoD** (what conditions must be met before a backlog item is considered complete).
 - These definitions should be overarching criteria for all stories and must be true for a story to be complete.
-

Tools & Software Suggestions

Your team should use at least **one Agile project management tool** for this project, such as:

- **Miro** (templates of all kinds)
 - **Trello** (Simple drag-and-drop board for managing tasks)
 - **Asana** (Task and roadmap tracking)
 - **Monday.com** (Project planning and execution)
-

Group Participation & Peer Feedback

1. Self & Peer Assessment Form:

- Each student will rate themselves and their team members on a scale (e.g., 1-5) based on:
 - Contribution to discussions & meetings
 - Effort in assigned tasks
 - Collaboration & support of teammates
- They will also provide brief written feedback on team dynamics.

2. Instructor Review:

- The instructor will consider peer feedback when assigning participation scores.
 - If any discrepancies arise (e.g., someone consistently rated low by teammates), the instructor can follow up.
-

Final Submission:

- Each team will submit all the items in the dropbox on D2L.
 - The group will give a 10-minute team presentation summarizing their approach
 - Each individual team member will submit a Group Participation & Peer Feedback form.
-

Evaluation Criteria

CRITERIA	WEIGHT (%)
CLARITY OF AGILE VISION STATEMENT	10%
QUALITY OF ROADMAP AND BACKLOG	20%
COMPLETENESS OF AGILE PROJECT BOARD	20%

WELL-DEFINED USER STORIES	15%
AGILE CEREMONIES & PROCESSES	15%
DEFINITION OF READY & DONE	10%
PRESENTATION & ORGANIZATION	5%
GROUP PARTICIPATION & PEER FEEDBACK	5%
